

## **Test Summary**

The testing process was conducted to verify the core functionalities and overall stability of the application. Testing included key user flows such as page navigation, user registration, login functionality, and basic interaction with the system.

A set of test cases was executed covering the main features of the application. During testing, several issues were identified and documented in the bug report, primarily related to usability, input validation, and language consistency. None of the identified issues were critical blockers, but they may impact user experience.

Overall, the application is functional and stable for basic use. However, there are areas that require improvement, particularly in terms of user guidance, consistency, and transparency of information.

The recommendations provided in the “Improvements & Suggestions” section aim to enhance usability, reduce user errors, and improve the overall quality of the application.
